CASTLE CARY WRC

As part of an upgrade to Castle Cary WRC, we were awarded the contract to design, manufacture and install the access steelwork, tanks, pipe work and supports.

Our Delivery

- Capturing the requirements for 78 jobs across the site over a 14-month period.
- Carrying out surveys at different stages of construction on site and providing clear G.A. drawings to the client detailing the metalwork for each area.
- Manufacturing a wide range of metalwork on site from our standard access platforms to equipment covers, custom pipework with supports, stainless steel flow channels and distribution tanks.
- Providing risk assessments and method statements considering the specifics of each working area and installing on site, working closely with the site management team.
- A special thank you to our clients' project team who were a pleasure to work with on this project.
